Proposed Approval and Patient-Memory Update Sequence (D12)

Physician
Next.js Web UI
FastAPI Gateway
Decision and Audit Service
PostgreSQL Clinical Record
Memory Indexer
pgvector Patient Memory

Modify: audit only

1 Submit modified draft (UC16)
2 Save new proposal revision
3 Record revision + MODIFY action
4 Persist pending revision and audit snapshot
5 Saved
6 Return revised PENDING proposal

Modification does not update the clinical decision or patient memory.

Approve: clinical record then memory

7 Approve reviewed revision (UC17)
8 Submit explicit approval
9 Validate physician and revision

Atomic approval transaction

10 Record APPROVE action (FR42)
11 Mark reviewed revision APPROVED
12 Create ClinicalDecision (FR41)
13 Commit succeeds

14 Confirm approved clinical decision
15 Send approved decision only
16 Generate embedding (model TBD)
17 Store semantic memory link
18 Indexed for later retrieval

Reject: audit retained, memory unchanged

19 Reject reviewed proposal (UC18)
20 Submit rejection
21 Record REJECT action
22 Mark rejected + retain audit snapshot (FR40, FR42)
23 Rejection recorded
24 Display rejected status

Authorised input revisions have separate source links.
Pending and rejected proposals are excluded from
ClinicalDecision and semantic patient memory.
